Message from the UbiComp Adjunct Chairs

The adjunct program has always been a very important part of the UbiComp conference series, and this year is no exception. The conference is preceded by no less than two full days of workshops, featuring 12 one-day workshops, a programming competition, a workshop on broadening participation in the field, and a one-day Doctoral School. Posters, demos, and videos are scheduled at key moments within the main conference schedule: demos and posters form the highlight of the Welcome Reception on the first day and videos are woven into the regular session program. Long-time attendees of the respective conference series have come to appreciate the many opportunities that the adjunct program offers for creating interactions among community members.

This year we received a total number of 108 submissions to the UbiComp adjunct program and after the formal review process accepted 50 poster, 4 videos, and 25 demos. As in previous years, it was possible to submit one piece of work simultaneously as a demo, and poster, giving authors the opportunity to present their work in different presentation formats and ultimately receiving significantly more face-time with conference attendees. All submissions were peer-reviewed by at least two external reviewers plus an additional review by a committee member or session chair. All associated extended abstracts are available through the ACM digital library as part of the Adjunct Proceedings of UbiComp 2014.

Our thanks go to all authors who submitted their work to the UbiComp 2014 adjunct track – your active participation in this conference series is a key ingredient to its vibrancy and scientific relevance. We sincerely hope that you will enjoy the adjunct program as much as we did when organizing it!
