

The UbiComp 2014 Doctoral School

We are pleased to introduce the UbiComp 2014 Doctoral School, an exciting event designed to support and strengthen the community of student researchers by facilitating networking, providing mentoring, and fostering the exchange of ideas and knowledge.

We have retained many of the aspects that have made previous UbiComp Doctoral Consortia events successful and popular in the past, including the participation of world-class UbiComp researchers from academia and industry to serve as panelists, and the opportunity for the 8 student participants to receive direct feedback on their completed and remaining PhD research. This year's Doctoral School also includes shared events with the co-located International Symposium on Wearable Computers (ISWC) 2014 Doctoral School.

The Doctoral School co-chairs would like to thank the many people whose efforts have contributed to providing this event for the UbiComp doctoral students, including the conference organizers and conference committees for both UbiComp and ISWC, and the student volunteers. We would especially like to thank the panelists who have generously given their time and advice to help foster the research and careers of the doctoral students. We would also like to thank the National Science Foundation and ACM for their support.

Participation to the Doctoral School is open to the selected students and invited panelists only.
